- Network management tasks (outsourcing and process automation).
- Flexible service level agreements. (SLAs)
- Project management of NOC services.
- Backup for clients with existing NOC resources.

Our Services

Cloud Infrastructure Solutions

On-premise infrastructures are very difficult to deploy, configure and manage. The overall cost of deploying and maintaining infrastructure is very high and when the infrastructure goes end of life that is the total waste of money. The technologies are chaining every single day and its hard to keep your in-premise technologies up to date. Business owners can't waste their time and money to maintain IT infrastructure. By utilizing AIIT's Cloud Infrastructure Services your business will always run on the latest technologies provided by the world's top vendors like Microsoft, Amazon, Google and others.

- Software as a Service Includes Office365, GSuite.
- Infrastructure as a Service Includes Router, Switches, Firewall.
- Network Monitoring from Global Locations.
- Support for already deployed Cloud Infrastructure.
